

Although all customers can search for and compare products through ECAT, some customers either prefer or are required to use their legacy systems for actual order processing and billing.

If you are a DMLSS, TAMMIS or MEDLOG user, then your profile should be configured to have your Product Search screen display three additional elements to identify your ECAT products. These additional identifiers are **ECAT Supplier ID**, **Catalog ID**, and **Item ID**.

If you are a DMLSS user, these elements will be downloaded automatically into your DMLSS system when you use the “Download to DMLSS” functionality in the ECAT application. If you are an Army customer, you will have to manually enter these elements into your TAMMIS system. If you are an Air Force customer, you will have to manually enter these elements into your MEDLOG system.

Once you enter your order in your legacy system, it is processed and billed accordingly to your particular system’s business rules. The status of your order is reported back through your legacy application, where you can check the progress of your order and also through the ECAT application. To check the status of your order in ECAT, log onto the ECAT application, and click the **Status** tab. Click the **Order ID** of the order whose status you want to check. This will open the **Order Summary** page. The status of your order will be at the bottom of the page.
